## Adopt a coral during lockdown & help protect our oceans

### ADOPT A CORAL

The NGO Coral Guardian's **restoration actions are not affected during lockdown**. Take this time to think about the environment and act by adopting a coral.

With "**Adopt a coral**", Coral Guardian offers you the option of an original and useful present for the ocean lover in your life. By adopting a coral for 30€ on their website, Coral Guardian transplants your coral on coral reefs that have been previously destroyed due to global warming and human activities. The coral fragments are always indigenous species

so as not to disturb the local ecosystem.

Thanks to your action, these reefs come back to life and biodiversity can settle there again. By adopting a coral, you receive a **personalised adoption certificate** with its GPS coordinates, a photograph, the name you have chosen for the coral and a photograph of the person who transplanted it. Adopting a coral is more than just a present for your friends, family and for oceans in general; it is also a gift to local communities that depend on these ecosystems to live.

You can also follow **the evolution of the restored coral reef** your coral contributed to by signing up to the NGO's newsletter on their website or by following them on social media.
